

Exercise 1: Travel Consulting Company

ASSUMPTIONS

- Current-state model only. Team and consultant assignments are updated in place.
- The company has exactly 12 teams.
- A consultant is assigned to one or more teams; a team has one or more consultants.
- A region may be handled by zero or more teams; each team handles exactly one region.
- Each call concerns exactly one customer.
- A call about an existing reservation references exactly one reservation; a call about a new travel need has no reservation.
- Each reservation belongs to exactly one customer.
- customerId and reservationId are introduced only to implement relationships because the requirements do not provide identifiers for these entities.
- callType is either new travel need or existing reservation.
- Monthly statistics are derived from callDate, callType, and duration.

Exercise 2: DVD Rental Company

ASSUMPTIONS

- Current-state model only. Staff and manager branch assignments are updated in place.
- A member may belong to several branches; registrationDate belongs to each membership.
- Each branch has exactly one manager, and that manager is one of its staff members.
- memberFullName and movieTitle are not duplicated in rental because they can be obtained through the related member and movie records.
- dailyRentalCost is stored once for each movie/branch combination in branch_movie.
- Price history is not tracked; the model stores the current standard daily rental rate for a movie at a branch.
- A rental occurs at the branch represented by the rented DVD's branch_movie record, and the member must have a member_branch record for that branch.
- A member may have at most ten unreturned rentals at one time.
- returnedDate is NULL until the DVD is returned.
